[smime.p7s](#)

Hi Lily,

I am out of the office the following two weeks, so selected dates after that.

The suggested times are all at 4pm? Is this correct? My RASO (radiological) folks are located on the east coast, so that would be 7pm their time. If possible, please try to for earlier meeting times.

Thanks, Derek

Dear Derek,

Bradley asked us to suggest times that work for us.

Re specific questions. I did leave a msg for Dan letting him know that if he isn't more specific that we may not have the answers right away. But sometimes we can just listen to the question, and if we don't have the answer right away, we can offer to get back to them later. I'm working with Nina on answering one of the specific questions we've already received re rad. It sounds like many of the questions are likely to relate to rad.

Re meeting in person, It's often better to meet in person to be able to look at data together more easily and to build a relationship. However, I understand that from San Diego can be difficult. So it sounds like they're more interested in talking sooner rather than later. Maybe conference call for you can be ok 2nd choice. But since we are local, we can meet in person and then call you and anyone else (e.g. RASO) in if necessary

Here's a survey about times. Can you check which ones might work for you?

You have initiated a poll "EJ Task Force - Hunters Pt" at Doodle. The link to your poll is:

Do we have a requested day/time for the meeting yet? If the Navy accepts the invitation to attend, I'll need to know as soon as possible to arrange for technical support to be available.

The topics "Numerous questions about status of characterization, environmental impact review, and remediation for different portions of HPBV" and "Questions about pre- and post-remediation risk assessments for both chemicals and radionuclides" are too general to prepare for. Dr. Hirsch should be aware that if he cannot be more specific prior to the meeting, then the Navy/Agencies may not be prepared to answer questions.

What is the reason this meeting needs to be held in-person?

Derek

Dr. Hirsch just sent these topics.

Lily,

Among the technical issues about which we have questions and for which it would be helpful to have your technical people available who can answer questions in those areas are:

1. How the remediation goals for radionuclides were derived.

2. How the risk estimates for specific estimated radiation doses were derived, and how those doses themselves were derived.
3. The standards that have been and are being used to declare materials to be or not be low-level radioactive waste and where these materials have been and are being sent for disposal or recycling.
4. Questions about pre- and post-remediation risk assessments for both chemicals and radionuclides.
5. Numerous questions about status of characterization, environmental impact review, and remediation for different portions of HPBV.
6. Availability of various key documents.

We have some general questions about the above subject areas, but also detailed specific technical questions
